Health Awareness Generation Program (Online)

In the Covid-19 Pandemic situation

Date- 29.05.2021

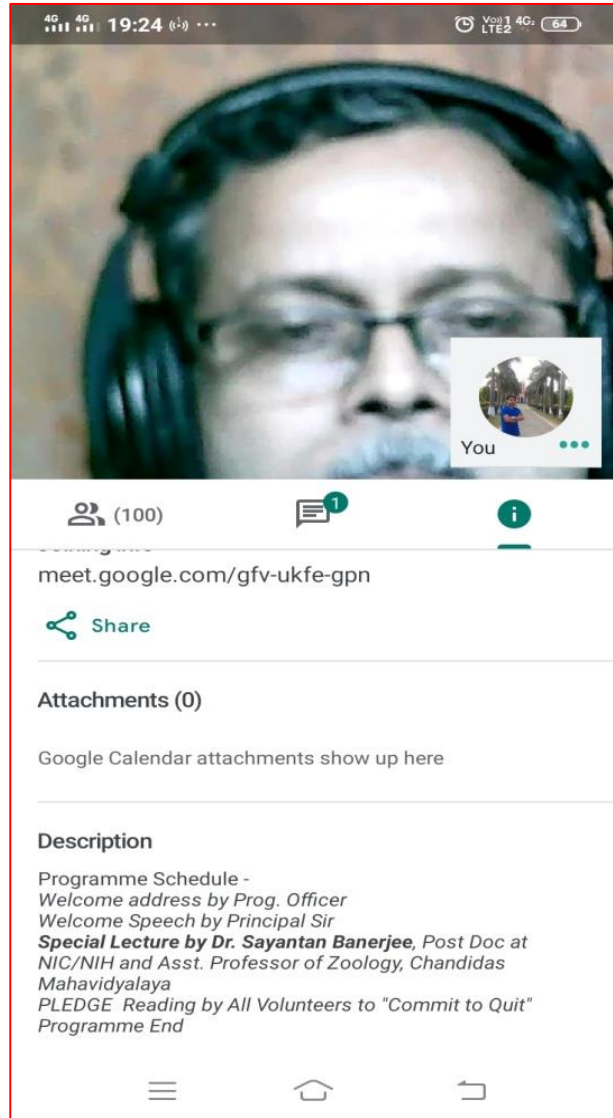

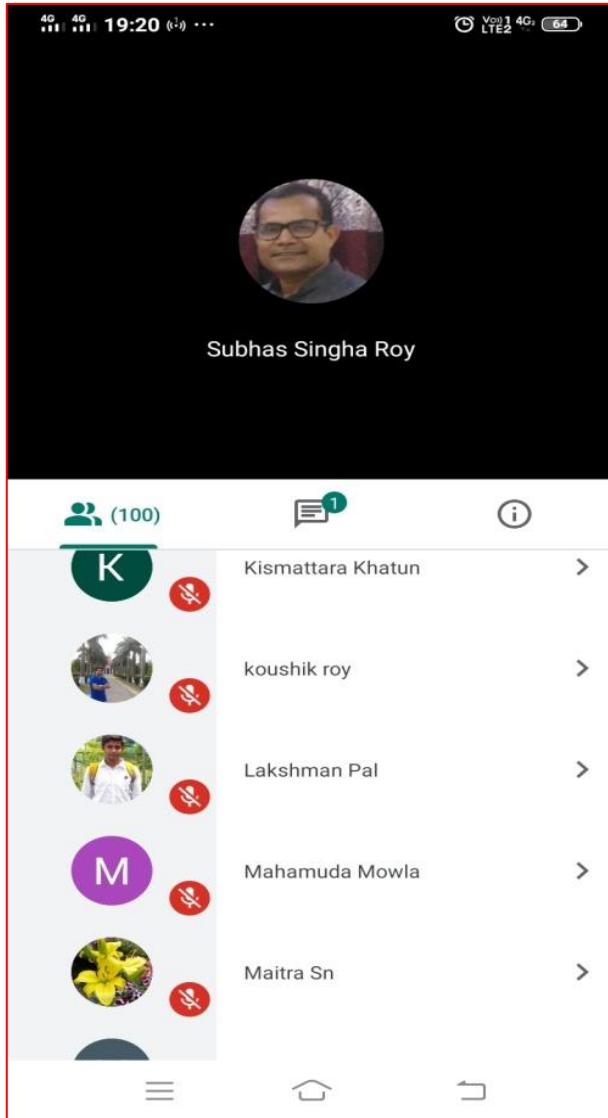

WEBINAR & ONLINE OBSERVATION OF THE "INTL. NO TOBACCO DAY"

For the Youth Awareness Program

On – 31.05.2021

SARS CoV2, COPD and Tobacco

COVID-19 and tobacco use

Continued use directly contributes to **QUIT TOBACCO USE**

YOUR RISK OF GETTING THE CORONAVIRUS IS BIGGER IF YOU USE TOBACCO

Putting a tobacco product in your hand means your lungs are closer to your face, which can spread the virus to your mouth, nose or eyes.

Tobacco use is often a social activity, and if you are surrounded with other people, you may spread the virus to your friends, family, and colleagues.

Quitting now can reduce your risk of getting the virus. Quitting now can also reduce the severity of your illness if you do get it.

SMOKING AND COPD

It's the **LUNG'S**

Smoking is linked to up to **90%** of all COPD deaths in the United States.

It takes **26** years, on average, to die from COPD. Many die from smoking complications.

It takes **23** years, on average, to die from COPD. Many die from smoking complications.

Tobacco Induced Cancers

Tobacco use causes cancer throughout the body.

- Bladder and kidney cancer
- Esophagus
- Lung
- Stomach
- Colon
- Rectum
- Prostate
- Uterine cervix
- Oral cavity
